## C Corridor temperature by canopy

Land within 60 m of a stream is **8%** of the city but **26%** of its coolest land.

Trees, not water, do the cooling: corridors with over 75% canopy are **7.7 °C** below the city median; under 25% canopy, **2.7 °C**.

Data: Landsat 8 (USGS), Jul–Aug 2013–2025, surface (not air) temperature; land cover, streams: Chesapeake Conservancy / UMBC; canopy height: Meta / WRI. EPSG:32618. Oct 2026.
